

IN THE CLAIMS

1 (Currently Amended). A method comprising:
transmitting an enhanced television program and a real time event; and
automatically transitioning display of the program to full screen at the end of the
program in response to said real time event to prevent accessing enhancements.

Claims 2 and 3 (Canceled).

4 (Original). The method of claim 1 including transmitting said real-time event through
an Internet Protocol multicast.

5 (Original). The method of claim 1 wherein transmitting a real-time event includes
transmitting a trigger.

6 (Original). The method of claim 5 wherein transmitting a trigger includes transmitting
a trigger with a Uniform Resource Locator.

7 (Original). The method of claim 6 wherein transmitting a Uniform Resource Locator
includes transmitting a Uniform Resource Locator using the tv: protocol.

8 (Original). The method of claim 1 including transmitting a real-time event that warns
that the end of a program is approaching.

9 (Original). The method of claim 8 including enabling the user to elect to retain
enhancements after receiving said real-time event warning of the end of the program.

10 (Currently Amended). An article comprising a medium storing instructions that, if
executed, enable a processor-based system to:

transmit an enhanced television program and a real time event; and

automatically transition display of the enhanced television program to full screen at the end of the program to prevent access to enhancements by transmitting said real time event.

Claims 11 and 12 (Canceled).

13 (Original). The article of claim 10 further storing instructions that enable the processor-based system to transmit a real-time event in the form of a trigger.

14 (Original). The article of claim 13 further storing instructions that enable the processor-based system to transmit a real-time event that warns that the end of the program is approaching.

15 (Original). The article of claim 13 further storing instructions that enable the processor-based system to transmit a trigger including a Uniform Resource Locator in the form of the tv: protocol.

16 (Original). The article of claim 14 further storing instructions that enable the processor-based system to enable the user to elect to retain enhancements after receiving said real-time event warning of the end of the program.

17 (Currently Amended). A system comprising:

a processor-based device; and
a storage coupled to said processor-based device storing instructions that enable the processor-based device to automatically transition display of an enhanced television video program to full screen at the end of the enhanced television program in response to a real time event to prevent the display of enhancements thereafter.

18 (Original). The system of claim 17 wherein said storage stores instructions that enable the processor-based device to transmit a trigger that indicates the end of the program.

19 (Original). The system of claim 18 wherein said storage stores instructions that enable the processor-based device to transmit a trigger including a Uniform Resource Locator using the tv: protocol.

20 (Original). The system of claim 17 wherein said storage stores instructions that enable the processor-based device to transmit a real-time event that warns that the end of an enhanced television program is approaching.

21 (Original). The system of claim 20 wherein said storage stores instructions that enable the user to elect to retain enhancements after receiving said real-time event warning of the end of the program.

Claims 22-30 (Canceled).
